Kurzfassung der Dissertation 7

Abstract 9

List of symbols 17

1 Introduction 21

2 State of the art 23
2.1 The Formation of Process Induced Deformations 23
2.2 Definition of Deformations modes 27
2.2.1 Definition of Spring-In 27
2.2.2 Definition of Warpage 27
2.3 Experimental investigation of process induced distortions 28
2.3.1 Process induced distortions in flat specimens 28
2.3.1.1 Symmetric laminates 28
2.3.1.2 Unsymmetrical laminates 29
2.3.2 L-brackets 29
2.3.3 U-brackets 31
2.4 Modelling approaches for Process Induced Distortions 31
2.4.1 Analytical Approaches 31
2.4.1.1 Simulation of Spring-In 31
2.4.1.2 Simulation of Warpage 32
2.4.2 Phenomenological Approaches 34
2.4.2.1 Simulation of Spring-In 34
2.4.2.2 Simulation of Warpage 36
2.4.3 Physical-based Approaches 37
2.4.3.1 Incrementally elastic models 37
2.4.3.2 Viscoelastic models 37
2.5 Influence of interleaf layers on process induced distortions 38

3 Objective 39

4 Experimental Investigations 41
4.1 Material and production process 41
4.2 Flat specimens 41
4.2.1 Investigated Parameters 41
4.2.2 Investigation of influence of tooling on warpage 44

4.2.2.1 Part manufacturing ... 45
4.2.2.2 Distortion measurement ... 45
4.2.2.3 Results and discussion ... 45
4.2.3 Investigation of the influence of the geometry on warpage ... 46
4.2.3.1 DoE study configuration ... 47
4.2.3.2 Degree of cure ... 47
4.2.3.3 Distortion measurement ... 47
4.3 L-brackets ... 48
4.3.1 Overview of parameters investigated on L-brackets ... 48
4.3.2 Investigation of layup effects on L-bracket distortions ... 48
4.3.2.1 Part manufacturing ... 48
4.3.2.2 Degree of cure ... 49
4.3.2.3 Laminate Morphology ... 49
4.3.2.4 Thickness Distribution ... 53
4.3.2.5 Process Induced Distortions ... 53
4.3.2.6 Summary and conclusion ... 58
4.3.3 Investigation of the geometry and process effects on L-bracket distortion 58
4.3.3.1 Distortion results ... 60
4.3.3.2 Degree of cure ... 61
4.3.3.3 Thickness distribution ... 63

5 Phenomenologic approach ... 67
5.1 Concept ... 67
5.2 Modelling approach for warpage ... 68
5.3 Modelling approach for Spring-In ... 71
5.4 Model validation ... 74
5.4.1 Flat plates ... 74
5.4.2 L-brackets ... 75

6 Physical-based approach ... 79
6.1 Material characterization ... 79
6.1.1 Glass transition temperature and degree of cure ... 79
6.1.1.1 Literature review on the cure kinetic ... 79
6.1.1.2 Measurements of the glass transition temperature ... 80
6.1.2 Material stiffness ... 80
6.1.2.1 Literature review on the material stiffness measurements ... 80
6.1.2.2 Measurements performed to determine the gel point ... 83
6.1.2.3 Measurements to determine the stiffness the material above the gel point ... 84
6.1.3 Coefficient of thermal expansion ... 84
6.1.3.1 Literature review ... 84
6.1.3.2 Measurement of the thermal expansion of material above the gel point ... 86

6.1.3.3 Measurement of the thermal expansion of material below the gel point ... 88
6.1.4 Chemical shrinkage ... 90
6.1.4.1 Literature review ... 90
6.1.4.2 Measurement of chemical shrinkage using the material density 90
6.1.4.3 Measurement of the chemical shrinkage using the rheoemeter 92
6.2 Homogenization approach considering interleaf layers ... 96
6.2.1 Micro-scale rules of mixture ... 96
6.2.1.1 CFRP-layer ... 96
6.2.1.2 Interleaf-layer ... 97
6.2.2 Meso-scale rules of mixture ... 97
6.2.2.1 Elastic modulus ... 98
6.2.2.2 Poisson's ration ... 101
6.2.2.3 Shear modulus ... 103
6.2.2.4 Thermal expansion ... 104
6.2.2.5 Chemical shrinkage ... 107
6.2.3 Discussion of the derived mixture rules ... 109
6.3 Material model ... 112
6.3.1 Cure kinetics ... 112
6.3.1.1 Literature review ... 112
6.3.1.2 Applied cure kinetics model ... 113
6.3.2 Glass transition temperature ... 115
6.3.2.1 Literature review ... 115
6.3.2.2 Applied model for the glass transition temperature ... 116
6.3.3 Stiffness ... 116
6.3.3.1 Literature review ... 116
6.3.3.2 Newly developed model for the stiffness of the matrix ... 119
6.3.4 Thermal expansion ... 123
6.3.4.1 Literature review ... 123
6.3.4.2 Newly developed model for the thermal expansion ... 123
6.3.5 Chemical shrinkage ... 125
6.3.5.1 Literature review ... 125
6.3.5.2 Applied model for the chemical shrinkage ... 125
6.4 Modeling of Tool-Part-Interaction ... 128
6.4.1 Literature review on Tool-Part-Interaction ... 128
6.4.1.1 Experimental investigation of tool-part-interaction ... 128
6.4.1.2 Modeling approaches for Tool-Part-Interaction ... 129
6.4.2 Applied model for Tool-Part-Interaction ... 129
6.5 Validation ... 130
6.5.1 Simulation of flat specimen ... 130
6.5.2 Simulation of L-brackets ... 130
6.6 Recommended approach for physical based simulation ... 132

7 Application 135
7.1 Scope of this chapter 135
7.2 Experimental investigations 135
7.2.1 Description of the investigated part 135
7.2.2 Manufacturing 135
7.2.3 Distortion measurement 137
7.3 Phenomenologic simulation 139
7.3.1 Model description 139
7.3.2 Results 140
7.4 Physical based simulation 140
7.4.1 Model description 140
7.4.2 Results 141

8 Summary and Conclusion 143
8.1 Summary 143
8.2 Conclusion 143
8.3 Outlook 144

A Process induced distortion meassurements 147
A.1 Flat specimens 147
A.2 L-brackets 148
A.2.1 Investigation of different layups 148
A.2.2 Investigation of process and geometry effects 161

B Mesh-Study 163
B.1 Overview of element formulations in Abaqus Standard 163
B.2 Mesh investigation on spring-in simulation 163
B.3 Mesh investigation for bending modes 168
B.4 Mesh investigations on the warpage deformation 169
B.5 Recommendations for the element-size and mesh densities 170

C Phenomenologic simulation 173
C.1 Determined effects for the linear substitution model of L-brackets 173

D Material characterization 175
D.1 Chemical shrinkage measurements 175
D.1.1 Shrinkage determination by density measurements 175
D.1.2 Shrinkage determination by rheometer measurements 175
D.1.3 Parameters used for the material model 176

E Tool-Part-Interaction 177
E.1 Simulation results for the determination of the linear substitution model 177

F Co-Supervised Student Theses 179
