<b>Vorwort des Herausgebers</b>	i
<b>Zusammenfassung</b>	iii
<b>Author's preface</b>	vi
<b>1 Introduction</b>	1
<b>2 Gasoline direct injection engines</b>	5
2.1 History . . . . .	5
2.2 Principle . . . . .	6
2.2.1 Operation strategies . . . . .	6
2.2.2 Components of the fuel supply system . . . . .	9
2.3 Mixture formation mechanisms . . . . .	10
2.3.1 Jet break-up and droplet formation . . . . .	10
2.3.2 Droplet size and droplet lifetime . . . . .	12
2.4 Potential of high-pressure injection . . . . .	13
2.4.1 Influence of the injection pressure on the fuel droplet size . . . . .	13
2.4.2 Increase of the engine efficiency . . . . .	13
2.4.3 Effect of high injection pressure on pollutant emissions . . . . .	14
2.4.4 Issues related to high injection pressure . . . . .	14
<b>3 Liquid pumps</b>	17
3.1 Pump designs . . . . .	17
3.2 Reciprocating displacement pumps . . . . .	19
3.2.1 Kinematics . . . . .	19
3.2.2 Piston pump process . . . . .	21
3.2.3 Power and efficiency . . . . .	22
3.2.4 Multi piston pumps and pressure impulses . . . . .	25
3.3 Specific requirements for gasoline high-pressure fuel pumps . . . . .	27
<b>4 Tribology</b>	31
4.1 Definition and challenges . . . . .	31
4.2 Tribotechnical system . . . . .	31
4.2.1 Engineering surfaces . . . . .	32
4.2.2 Contact process . . . . .	34
4.2.3 Kinematics . . . . .	35

## Contents

4.3	Friction . . . . .	36
4.3.1	Friction mechanism . . . . .	37
4.3.2	Friction measurands . . . . .	38
4.4	Wear . . . . .	38
4.5	Lubrication . . . . .	41
<b>5</b>	<b>Advanced ceramics</b>	<b>45</b>
5.1	Basics . . . . .	45
5.1.1	Definition and general properties . . . . .	45
5.1.2	Types of advanced ceramics and their application . . . . .	46
5.1.3	Manufacturing process . . . . .	47
5.1.4	Specific mechanical properties of ceramics . . . . .	47
5.1.5	Design of ceramic components . . . . .	49
<b>6</b>	<b>Investigations</b>	<b>51</b>
6.1	Investigated high-pressure fuel pumps . . . . .	51
6.1.1	Single-piston prototype pump . . . . .	51
6.1.2	3-piston prototype pump . . . . .	54
6.1.3	Commercially available high-pressure pumps . . . . .	57
6.2	Material tested in the sliding systems . . . . .	58
6.2.1	Ceramic materials . . . . .	58
6.2.2	Material combinations . . . . .	61
6.2.3	Material properties . . . . .	62
6.2.4	Surface finish . . . . .	63
6.3	Fuels . . . . .	64
6.4	Test bench . . . . .	65
6.5	Test procedure . . . . .	66
6.5.1	Single-piston prototype pump . . . . .	66
6.5.2	3-piston prototype pump . . . . .	67
6.5.3	Commercially available pumps . . . . .	68
<b>7</b>	<b>Results</b>	<b>69</b>
7.1	Performance of the reciprocating sliding systems in the single-piston prototype pump . . . . .	69
7.1.1	Comparison of the theoretical and measured parameters . . . . .	69
7.1.2	Friction in the investigated sliding systems . . . . .	73
7.1.3	Surface analysis . . . . .	82
7.2	Application in a 3-piston pump . . . . .	85
7.2.1	Comparison of theoretical and measured parameters . . . . .	85
7.2.2	Mechanical efficiency with various material pairs in the cam/pusher system . . . . .	86
7.2.3	Cyclic variations and noise emission . . . . .	91
7.2.4	Evolution of the efficiencies over time . . . . .	95
7.2.5	Surface analysis . . . . .	96

7.3	Performance of commercially available pumps . . . . .	102
7.3.1	Mechanical efficiency and cyclic variations . . . . .	102
7.3.2	Evolution of the Bosch CP1 efficiency over time . . . . .	104
7.3.3	Wear analysis . . . . .	104
<b>8</b>	<b>Discussion</b>	<b>107</b>
8.1	Appropriate material pairs for the application in gasoline-lubricated sliding systems . . . . .	107
8.1.1	Friction losses . . . . .	107
8.1.2	Wear acceptance . . . . .	108
8.1.3	Noise emission and cyclic variations . . . . .	110
8.1.4	Design complexity and costs . . . . .	111
8.1.5	Qualitative evaluation of the investigated material pairs in the cam/pusher system . . . . .	111
8.2	Optimization of the pump specifications for an improved mechanical efficiency . . . . .	113
8.3	Volumetric losses . . . . .	113
8.4	Impact on the engine performance . . . . .	116
<b>9</b>	<b>Summary</b>	<b>123</b>
