<i>Acknowledgements</i>	5
<i>List of symbols</i>	6
<i>List of subscripts</i>	7
<i>List of abbreviations</i>	8
1. Introduction	10
2. Theory	11
2.1 Background information	11
2.2 Extracellular transport	12
2.3 Model protein – industrial enzyme β -glucanase	15
2.4 Plasmid selection and alternative strategies	18
2.5 The leucine biosynthetic route	24
2.6 The Keio collection	25
2.7 Glycerol metabolic pathway	26
2.8 Real-time PCR	27
2.9 Green fluorescent protein for measurement of promoter activity	31
2.10 The stationary phase of bacterial growth	33
2.11 Continuous cultivation	34
3. Objectives	52
4. Materials and Methods	53
4.1 Strains and Plasmids	53
4.2 Growth media	60
4.3 List of solutions	63
4.4 Instruments, chemicals and consumables	66
4.5 Molecular genetic methods	69
4.6 Microbial cultivation	76
4.7 Bioprocess analytics	79
4.8 RNA Analysis	85

4.9 Relative plasmid abundance measurement.....	90
4.10 Fluorescence analysis	90
5. Results and Discussion	92
5.1 Characteristics of growth and β -glucanase expression in <i>E. coli</i> JM109-p582.....	92
5.2 Auxotrophic system based on leucine biosynthesis	107
5.3 Auxotrophic system based on glycerol metabolism.....	129
5.4 Efficiency of various strains and plasmids	158
5.5 Comparison of reference and alternative systems	159
5.6 Analysis of P _{fic} activity by RT-qPCR.....	162
5.7 Analysis of relative plasmid abundance	184
5.8 Analysis of P _{fic} activity by GFP fluorescence measurement	188
6. Conclusion	193
7. References.....	195
8. Appendix.....	209
<i>Publications</i>	217
